How to Choose the Right Structural Engineer for Your Building Safety Case

Selecting the right structural engineer is one of the most important steps when preparing a Safety Case Report under the Building Safety Act 2022. The engineer you appoint must have the technical expertise, regulatory awareness and practical experience to produce a regulator-ready Structural Safety Report (SSR).

Key qualities to look for

- Chartered status (MIStructE or CEng) to meet Building Safety Regulator expectations.
- Demonstrated experience with Higher-Risk Buildings and complex structures.
- Strong understanding of the Building Safety Act and Safety Case requirements.
- Clear, actionable reporting that supports owners, residents and regulators.
- Ability to integrate findings into the Golden Thread for lifetime compliance.

Choosing an underqualified professional risks delays, extra costs and possible non-compliance when the Building Safety Regulator reviews your submission.

Questions to ask before hiring

- Are you a Chartered Structural Engineer (MIStructE or CEng)?
- Have you completed Structural Safety Reports for HRBs before?
- Do you understand the Building Safety Act's Safety Case and Golden Thread requirements?
- Can you provide clear recommendations and next steps if risks are identified?
- Do you offer fast turnaround and portfolio pricing for multiple buildings?

How Structures Made Easy helps

- Chartered Engineer-led inspections and regulator-ready Structural Safety Reports.
- Deep experience across London's HRBs and complex structural types.
- Fast, reliable turnaround and portfolio-friendly pricing.
- Support with the Golden Thread and Safety Case documentation.
- Clear communication with owners, managing agents and residents.

The right engineer is your partner in achieving compliance, protecting residents and safeguarding your asset's value.
